It you throw something in
a beaker. Wehe something is
hit it it could I explode

If you throw something in a beaker, and when
something is in it, it could explode.

Congratulations to the

2018 American Chemical Society

Illustrated Poem Contest Winner

For the Western Michigan Section

Space a final frontier

By Loche near

The planets are beautiful and mysterious. I imagine how cool it would be to live on Neptune. Neptune is a gas giant and I could float through the air just like a superhero and I may even need to wear a mask. My task is to find out what it is like to live on neptune how cool it is if there could be life underneath the crust. I must find out what life there could be way out there in space so far from home that's what I want to find out.

Space

Chemistry is cool.

Chemistry is a tool.

Chemistry loves food.

When chemistry sees a bum it goes dumb.

When chemistry sees a lump it goes bumb.

When chemistry went to outer space it saw a planet named mace.

When chemistry went out of this world it curled!
