Effects of Carbon Monoxide upon the Eye. It gives an account of the ocular symptoms of such poisoning, revealing a distinct tendency of the poison to cause neuritis and especially to affect the optic nerve.

Carbon dioxide laser trabeculostomy provides a new method of lowering the intraocular pressure in severe cases of neovascular glaucoma without the hazard of intraocular hemorrhage.

-Woman injecting carbon dioxide GAS under her eyes to remove to dark circlers, but they quickly swell like a balloon. It also claims to increase collagen in the skin, making the face look more youthful, and that results can last up to six months.
